

Patent pending 3M™ Pressure Diffusion Temple Technology allows the temples to naturally adjust to individual head sizes.

New self-adjusting protective eyewear.

Experience the difference.

Introducing 3M™ SecureFit™ Protective Eyewear

3M understands how challenging it is to securely fit a diverse workforce with protective eyewear. Research has shown us that one in three employees does not wear safety eyewear when required, citing discomfort as the main reason*. Following extensive research into facial mapping, we've developed 3M™ SecureFit™ Protective Eyewear - a ground-breaking development in safety eyewear that self-adjusts to different head sizes, providing a comfortable and secure fit every time.

Featuring patent pending 3M™ Pressure Diffusion Temple Technology, 3M™ SecureFit™ Protective Eyewear provides noticeably higher levels of personal comfort and security of fit, while reducing the need to stock multiple designs of spectacles.

Patent pending 3M™ Pressure Diffusion Temple Technology allows the temples to naturally adjust to individual head sizes.

3M™ SecureFit™ Protective Eyewear. Because every head is different.

With 3M™ Pressure Diffusion Temple Technology there are no moving parts, and nothing to adjust. Simply put on 3M™ SecureFit™ Protective Eyewear and feel the difference as it self-adjusts to provide a comfortable and secure fit each time it is worn.

- Stylish design weighs just 18g for lightweight comfort
- Self-adjusts to comfortably fit a wide range of head sizes
- Available in clear, grey or amber lens tints
- Polycarbonate lens absorbs 99.9% UVA & UVB
- Features 3M™ Pressure Diffusion Temple Technology
- Meets the requirements of EN166:2001

3M™ Pressure Diffusion Temple Technology

Draws on years of scientific anthropometric research by 3M to determine the differences in face shape and sizes, by creating digital models of some 600 different touch points on the human face. The technology works by diffusing pressure over the ear to enhance frame comfort without compromising the security of fit across different facial profiles.

- Self-adjusts to fit a wide array of head sizes reducing the need to stock multiple frame sizes
- Provides a secure, comfortable fit without compromising comfort
- Helps reduce eyewear/frame slippage during workplace head movements
- Enhances frame comfort without sacrificing the security of fit
